

# Cybersecurity Solutions Overview

Today's businesses are relying on technology more than ever before. As a result, the amount of data created and stored has massively increased. Consequently, the need to protect critical information has become an essential business requirement.

A data breach can have devastating consequences for any business. It can damage a company's reputation through the loss of customer confidence. Additionally, the loss of critical data, such as source files or intellectual property, can cost a company its competitive advantage.

A cyber-attack can not only impact corporate revenues but can also result in significant fines due to non-compliance with data protection regulations. To minimise cyber-risks and continue to thrive, it is essential that organisations adopt and implement a proactive and robust cybersecurity approach.

## Comprehensive Security Portfolio

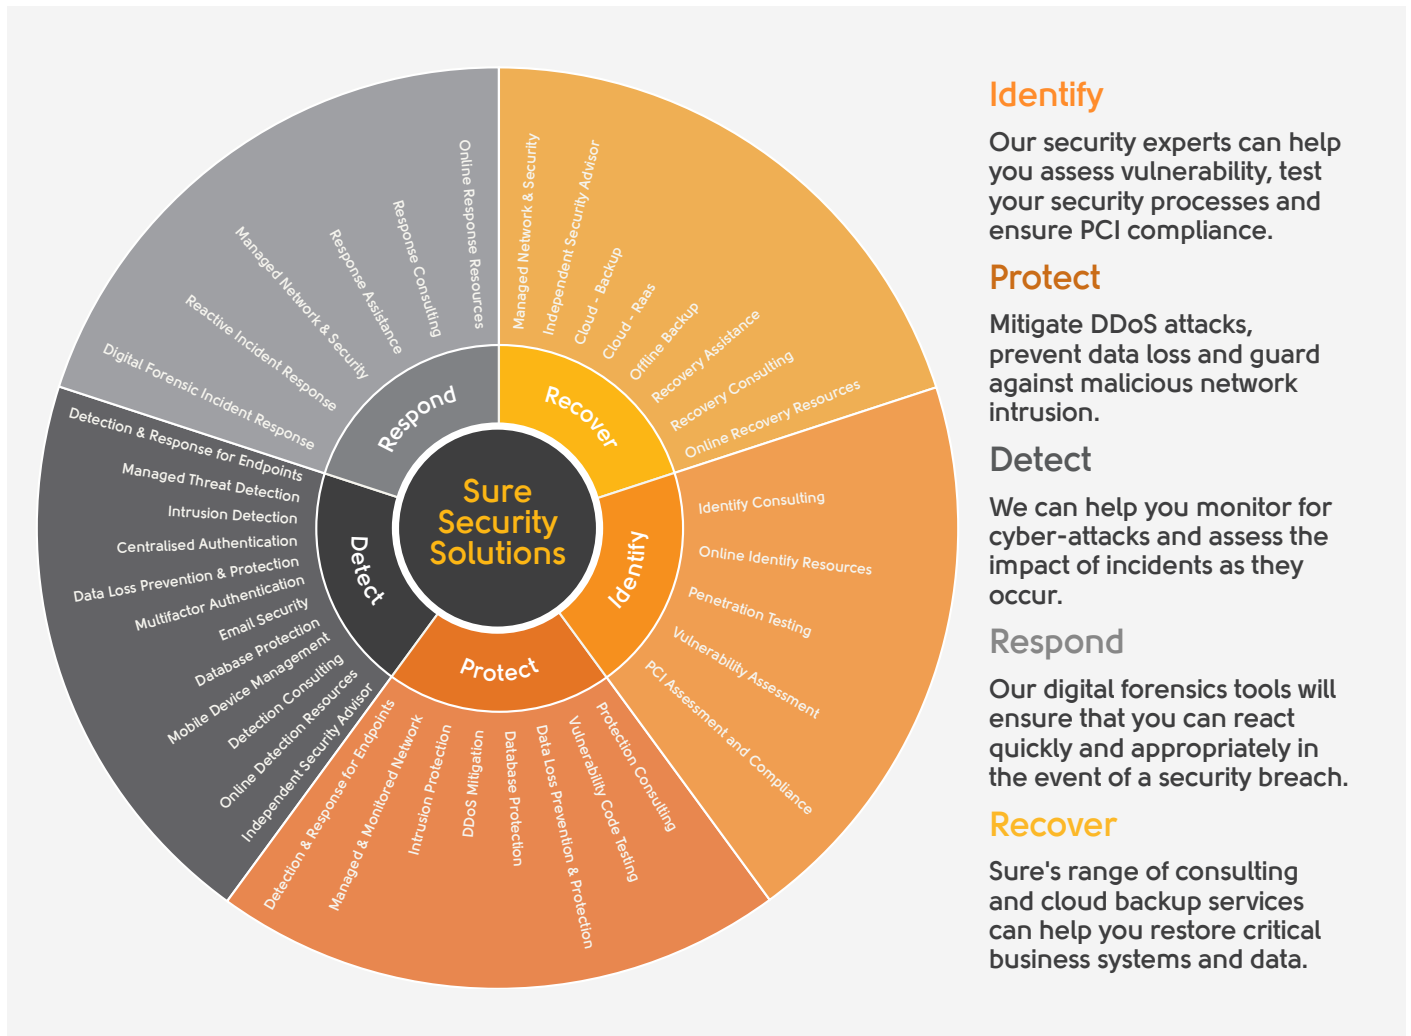

Sure's comprehensive security portfolio aligns closely with the National Cyber Security Centre and Guernsey Financial Services Commission Cyber Security Rules. This ensures that we can help you to be more compliant with regulation and create a safer environment for your critical business data.

Our cyber-security framework creates a structure to assess your current exposure to cyber-threats and audit your current systems and processes to identify vulnerabilities. Once you have established a security baseline we can help you design and implement solutions to ensure ongoing protection from attacks. In the event of a cyber-incident our experts can also help you quickly respond and recover your systems and data.

## Comprehensive Security Portfolio

From helping you to identify your critical data assets to responding and recovering from a cyber-security incident, Sure have the experience and technology to ensure that you are always protected.

### Identify

Our security experts can help you assess vulnerability, test your security processes and ensure PCI compliance.

### Protect

Mitigate DDoS attacks, prevent data loss and guard against malicious network intrusion.

### Detect

We can help you monitor for cyber-attacks and assess the impact of incidents as they occur.

### Respond

Our digital forensics tools will ensure that you can react quickly and appropriately in the event of a security breach.

### Recover

Sure's range of consulting and cloud backup services can help you restore critical business systems and data.

## Education

Sure offer a range of security awareness training programmes to keep your business up to date with the latest trends and security risks that may impact your business. Training can be tailored to all levels, ensuring that your entire business is able to remain secure and compliant.

## Advisory & Design

At Sure we have a team of specialist consultants with extensive expertise in cyber-security solutions. We can help you audit your infrastructure and processes, identify risks and vulnerabilities and implement robust security systems and policies. Ask your account manager how Sure's Advisory & Design Services can help with your cyber-security needs.
